

**WHERE CLEAN AND
HYGIENE MEET**

Proven Track Record

For nearly 30 years, Kleagiene Corporation has been a leader in microfiber development for consumer and commercial cleaning markets. We listen carefully to our customers and their end users to ensure that our products offer unbeaten quality, performance and value.

Manufacturing Excellence

Our commitment to quality and value begins with our approach to manufacturing, where we have made significant investments to vertically integrate all major phases of the production process including raw material ultrafine microfiber spinning, non-color bleeding coloration, automated cutting and sewing, visual imaging inspection and automated packaging. Controlling the process from end-to-end reduces timelines and improves quality control.

Exceptional Product Performance

Our disposable microfiber solutions pick up 99.7% of tested bacteria and viruses including SARS-Cov-2 virus with just water and can be discarded after use in a particular area, limiting cross contamination. Our reusable microfiber cloths can pick up 99.9% of tested bacteria and viruses including SARS-Cov-2 virus with just water and can be laundered hundreds of times making them an exceptional value. Antimicrobial cloths and mops work overtime to kill unseen bacteria and viruses which may remain on the microfiber surface after use and in between laundering; and our clean room microfiber is designed to meet International Standard ISO 14644-1 which measures the concentration of minute airborne particles present in clean rooms and clean zones. This stringent cleaning standard is required in controlled air environments like those found in foodservice, healthcare and technology sectors.

ELITE /Series

Our most advanced offering of microfiber solutions is designed to address the most demanding environments. All products in our Elite series feature high GSM construction and exceptional product performance, like our Ultrafine microfiber cloths which feature 32 split microfiber, ideal for removing tough stuck on debris.

PREMIUM /Series

We recognize the importance of managing your operations on a tight budget. Our Premium series products are designed to outperform competing products and provide an excellent value. Designed for routine, everyday cleaning, these product solutions help workers complete their cleaning tasks effectively and efficiently.

ELITE **Series**

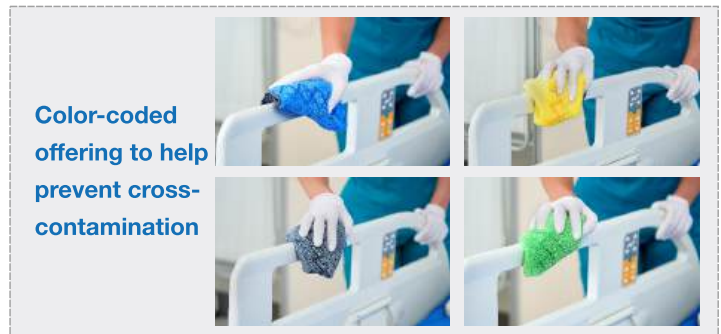

ELITE Microfiber

#HWECHY3701

- ◇ Picks up and removes 99.9% of tested viruses and bacteria with water alone.
- ◇ Double knit construction with continuously sewn edge cloth provides fewer failure points and longer life.
- ◇ Built-in scrubbing strips provide extra cleaning power.
- ◇ Color-coded offering helps prevent cross contamination by using a specific color in designated areas or for a specific task.
- ◇ Tested to withstand 200 commercial launderings with chlorine bleach, 500 commercial launderings without bleach.
- ◇ Compatible with all EPA Registered Hospital-Grade disinfectants.

ELITE microfiber cloths and mops remove 99.9% of tested bacteria and viruses - ideal for Healthcare settings or any environments that demand the highest level of clean.

Ultrafine Microfiber

Made from microfiber that features 32-Split construction. By increasing the number of times the microfiber material is split we effectively increase the surface area available to clean.

- ◇ Bi-component, 32 split microfiber removes 99.9% of tested viruses and bacteria with water alone.
- ◇ 32 split design dramatically increases the number of microfibers on a standard sized cloth.
- ◇ Double knit construction with continuously sewn edge cloth provides fewer failure points and longer life.
- ◇ Tested to withstand 200 commercial launderings with chlorine bleach, 500 commercial launderings without bleach.
- ◇ Compatible with all EPA Registered Hospital-Grade disinfectants.
- ◇ Can absorb up to 10X its weight in water.
